

Better Health Together

Assessment of Eastern Washington's inter-organizational collaboration, referral, and data exchange networks to improve community health

Key Takeaways

What are some of the most noteworthy things we learned?

Key Takeaways

- Organizations in the Better Health Together region have become better connected through collaboration, referral, and data exchange since 2016/2017.
- Better Health Together helped facilitated 350 new partnerships among 150 organizations.
- Organizations work extensively across sectors and geographic service areas to serve people living in BHT's 6-county region.

Introduction to Network Science and Analysis

What is it and how can it be used to better understand how organizations collaborate, refer, and exchange data to improve community health?

What is a network?

A collection of entities that are interconnected with links. For example:

- Web pages that link to one another
- People who are friends
- Organizations that collaborate

Network Science

What is it?

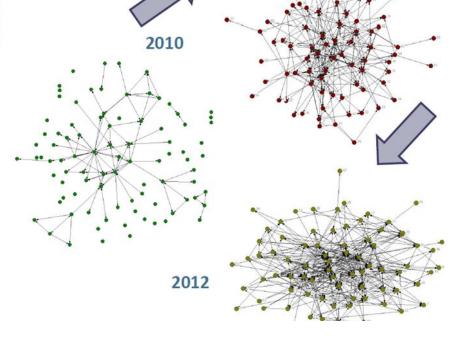

The study of network representations of physical, biological, and social phenomena leading to descriptive and predictive models of these phenomena (United States National Research Council)

Where does it come from?

- Graph theory from mathematics
- Statistical mechanics from physics
- Data mining and information visualization from computer science
- Inferential modeling from statistics
- Social structure from sociology

Year	#	Density	Avg # ties
2009	55	2.2%	1.2
2010	90	2.7%	2.4
2011	85	5.3%	4.5
2012	82	8%	6.88

2009

2011

Network Analysis

Structural Metrics (entire network)

- Graph density
- Diameter
- Clustering

Individual Metrics (node-specific)

- Degree
- Hub
- Centrality

Network Analysis for Continuous Improvement

Assess

Working siloes (cliques)

Influential, bridging, and periphery organizations

Needed connections

Plan

Strategic relationship improvement, creation, and consolidation

Network building or restructuring

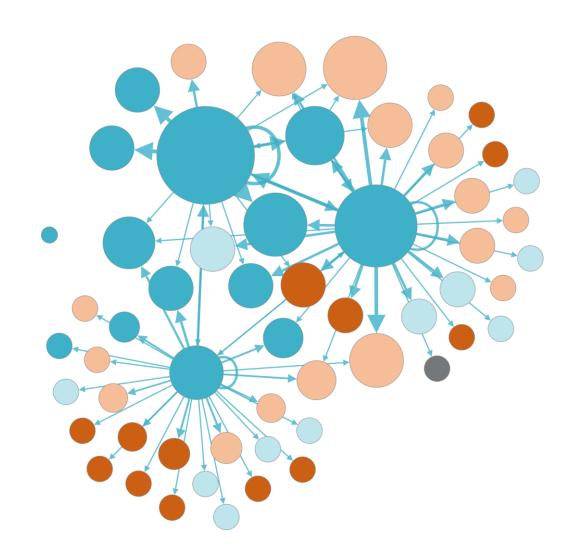

Evaluate

Change in network structure over time

Change in quality and type of connections over time

Interpreting Network Maps

NODES AND EDGES KEY

	Business Sector Organization		
•	Less Active		
	More Active		

Technical Notes

Methods and Limitations

Methods

Conceptual frames:

Accountable Communities of Health Model

Collective action

Cross-sector collaboration

Collaborative governance

Units of analysis:

Network (population & social determinants of health system)

Organization (health system participants)

Dyad (linkage)

Population: 617 cross-sector organizations across 6 counties and 3 tribal nations

Data collection: Web survey (xx% individual response rate; xx% network response rate)

Limitations

*	Results reflect individual reports of interorganizational relationships.	Organizations are complex institutions
222	All health system participants did not receive a direct invitation to respond to the survey.	Xx/xx organizations received a direct invite
	Survey research poses inherent limitations.	Respondent fatigue Closed-ended questions
N	Identified surveys may not yield the most accurate results.	Utility of identified networks Intentional follow-up and connections
	Responses are limited by Alliance member involvement.	Staff turnover at partner organizations Low engagement

Preliminary Network Findings

What's changed? *Full-network comparison; not directly comparable*

	2017 Collaboration + Referral + Data Exchange + Financial Support + Education	2019 Collaboration + Referral + Data Exchange	Change
# of identified organizations in system	564	617	+ 53 organizations
# organizations with reported activity	508	593	+ 85 active organizations
% organizations with reported activity	90%	96%	+ 6% active organizations
Silos	62	28	- 34 silos
Reported partnerships	9,039	7,219	- 1,820 linkages

What's changed? Limited network comparison; directly comparable

	2017 Collaboration + Referral + Data Exchange	2019 Collaboration + Referral + Data Exchange	Change
# of identified organizations in system	564	617	+ 53 organizations
# organizations with reported activity	402	593	+ 85 active organizations
% organizations with reported activity	71%	96%	+ 25% active organizations
Silos	167	28	- 139 silos
Reported partnerships	5,885	7,219	+ 1,334 linkages

BHT-Facilitated Linkages

This network map shows linkages that Better Health Together helped to create or maintain.

• Some linkages may represent more than one type of linkage.

Each circle represents an organization.

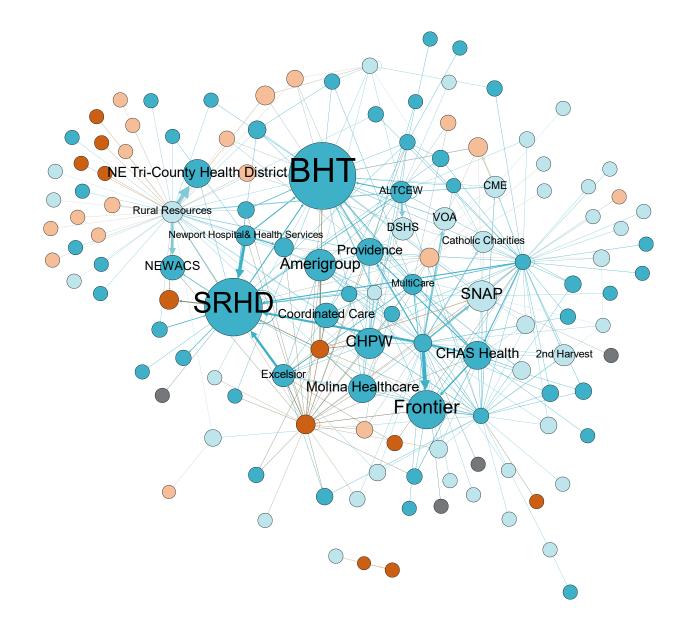

Circles are sized by the number of times another organization reported BHT facilitating a linkage with that organization; the larger the circle, the more times BHT helped the community connect with that organization.

BHT-Facilitated Linkages

We learned that BHT:

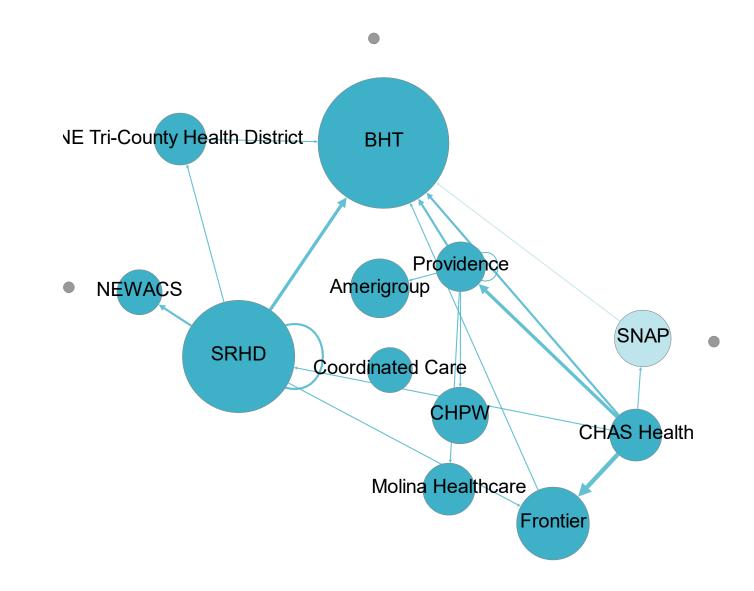

- Helped 130 organizations connect to one another.
- Facilitated 350 inter-organizational relationships of various linkage types.
- Was most helpful facilitating linkages to:
 - Health and social sector organizations
 - Regional, Spokane County, and Northeast Tri-County organizations

BHT-Facilitated Linkages

BHT facilitated 10 or more linkages between Eastern WA organizations and the following partners (# linkages shown in parentheses):

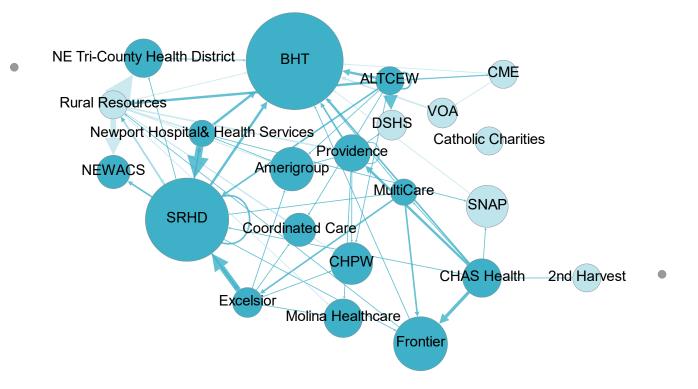

- Better Health Together (47)
- Spokane Regional Health District (39)
- Frontier Behavioral Health (22)
- Amerigroup (16)
- Community Health Plan of Washington (15)
- SNAP (Spokane Neighborhood Action Partners) (15)
- CHAS Health (13)
- Molina Healthcare (13)
- Northeast Tri-County Health District (13)
- Providence Health & Services (12)
- Coordinated Care (10)
- Northeast Washington Alliance Counseling Services (NEWACS) (10)

BHT-Facilitated Linkages

...and more than 5 linkages between Eastern WA organizations and the following partners:

- Volunteers of America Eastern
 Washington and Northern Idaho (8)
- Department of Social and Health Services (DSHS) (8)
- Excelsior Holistic Schools (8)
- Catholic Charities (7)
- Community-Minded Enterprises (7)
- Second Harvest (7)
- Aging & Long Term Care of Eastern WA (ALTCEW) (7)
- Rural Resources Community Action (7)
- MultiCare Health System INW (6)
- Newport Hospital & Health Services (6)

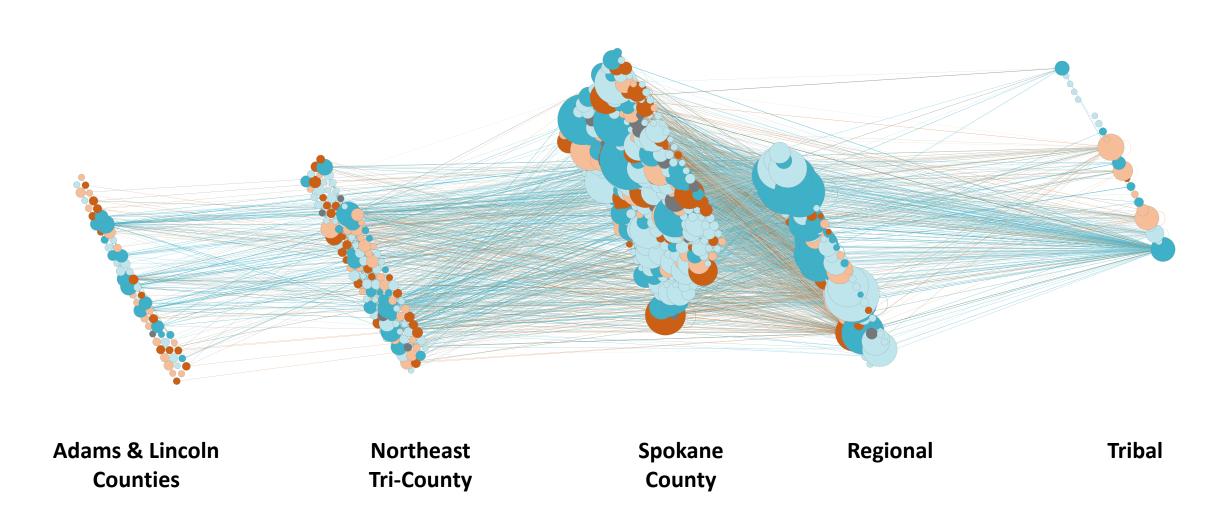

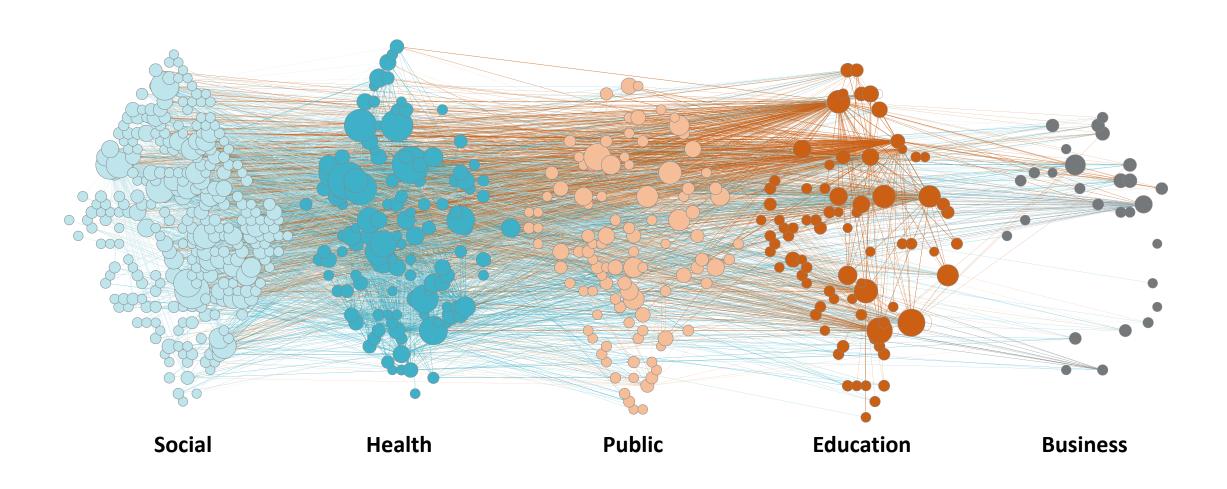

- 94% of BHT health system participants are active in the collaboration network.
- It is common for organizations to collaborate across boundaries to serve people living in BHT's 6-county region.
- Organizations collaborate across sectors more frequently than across geographic service areas (62% of collaborative linkages happen across sectors vs. 48% across geographic service areas).
- 1% of all possible collaborative partnerships were reported across the region.
- 43 collaboration silos exist across the region.
- On average, each organization maintains collaborative partnerships with 8 other organizations.

Collaboration Overview

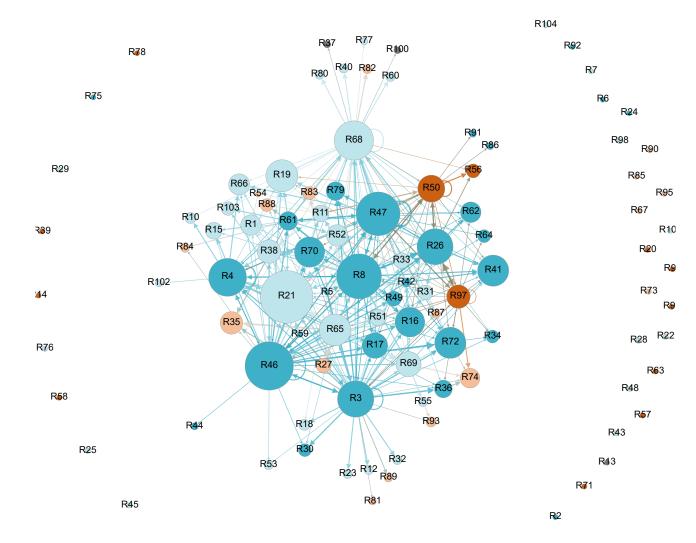

Collaboration Across Counties

Collaboration Across Sectors

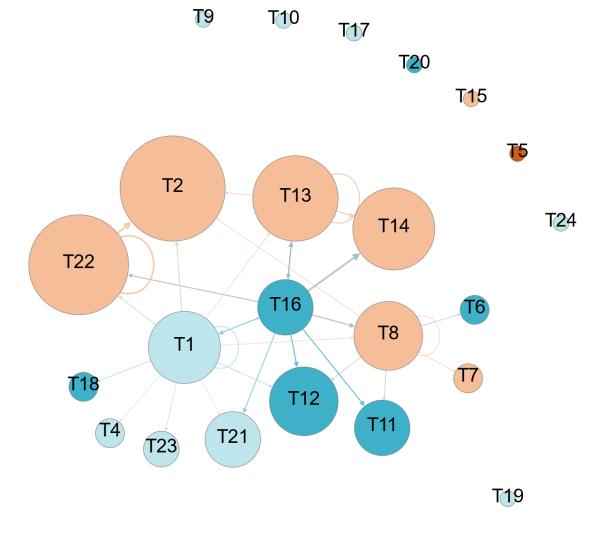

Collaboration among Regional Organizations

Collaboration among Regional Organizations

- 94% of regional organizations are active in the collaboration network.
- 66% of regional organizations collaborate with one another.
- Most regional organization collaboration linkages are with Spokane County organizations (61% of collaboration linkages); regional organizations collaborate least with tribal organizations (6% of reported linkages) and organizations in Adams & Lincoln Counties (6% of reported linkages).
- 3% of all possible collaborative partnerships were reported among regional organizations.
- 40 collaboration silos exist within the collaboration network of regional organizations.
- On average, each regional organization maintains 3 collaborative partnerships with other regional organizations.

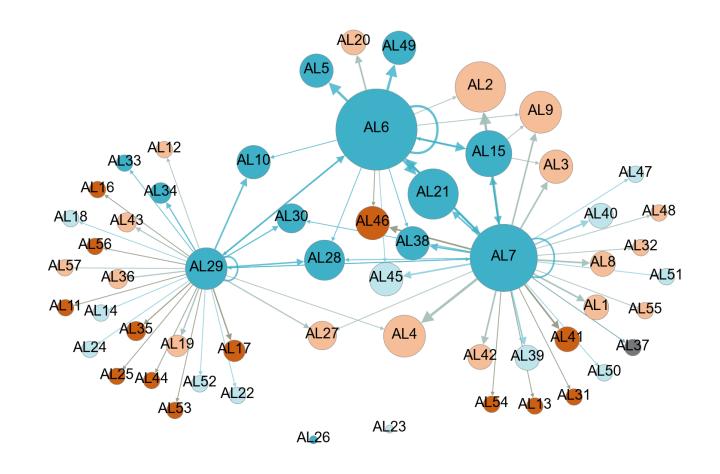

Collaboration among Tribal Organizations

- Tribal organizations collaborate extensively across geographic services areas (GSAs), with 92% of reported collaboration linkages made with organizations in other GSAs.
- 75% of tribal organizations are active in the collaboration network.
- 63% of regional organizations collaborate with one another.
- Most tribal organization collaboration linkages are with Spokane County organizations (45% of collaboration linkages) and regional organizations (37%); there was no reported collaboration between tribal organizations and organizations in Adams and Lincoln Counties.
- 6% of all possible collaborative partnerships were reported among tribal organizations.
- 12 collaboration silos exist within the collaboration network of tribal organizations.
- On average, each tribal organization maintains 1 collaborative partnerships with other tribal organizations.

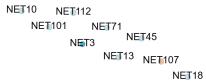

Collaboration in Adams & Lincoln Counties

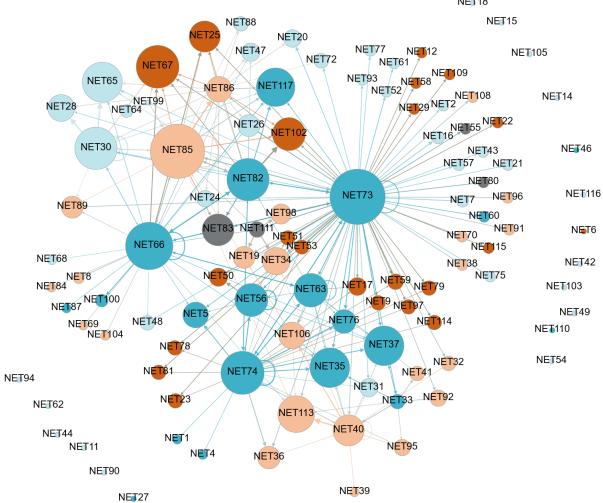

Collaboration in Adams & Lincoln Counties

- Adams & Lincoln Counties had the highest percentage of within-county collaboration of all geographic service areas (GSAs).
- Although Adams & Lincoln Counties have the highest representation of public organizations of the five GSAs, none of these organizations reported working with one another.
- 98% of Adams & Lincoln County organizations are active in the collaboration network.
- 96% of Adams & Lincoln County organizations collaborate with one another.
- Most Adams & Lincoln County organization collaboration linkages are with regional organizations (48% of collaboration linkages) and with other Adams & Lincoln County organizations (27%); there was no reported collaboration between Adams & Lincoln County organizations and tribal organizations and only 7% of Adams & Lincoln County collaboration was with Northeast Tri-County organizations.
- 3% of all possible collaborative partnerships were reported among Adams & Lincoln County organizations.
- 4 collaboration silos exist within the collaboration network of Adams & Lincoln County organizations.
- On average, each Adams & Lincoln County organization maintains 1 collaborative partnerships with other Adams & Lincoln County organizations.

Collaboration in Northeast Tri-County

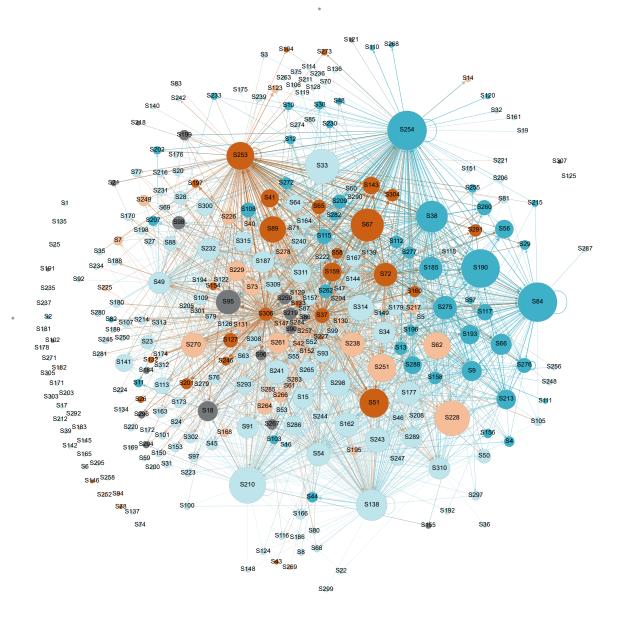

Collaboration in Northeast Tri-County

- 88% of Northeast Tri-County organizations are active in the collaboration network.
- 78% of Northeast Tri-County organizations collaborate with one another.
- Most Northeast Tri-County organization collaboration linkages are with regional organizations (43% of collaboration linkages) and with other Northeast Tri-County organizations (31% of linkages); there was little reported collaboration between Northeast Tri-County organizations and tribal organizations (5% of linkages) and Adams & Lincoln County organizations (3% of linkages).
- 2% of all possible collaborative partnerships were reported among Northeast Tri-County organizations.
- 30 collaboration silos exist within the collaboration network of Northeast Tri-County organizations.
- On average, each Northeast Tri-County organization maintains 2 collaborative partnerships with other Northeast Tri-County organizations.

Collaboration in Spokane County

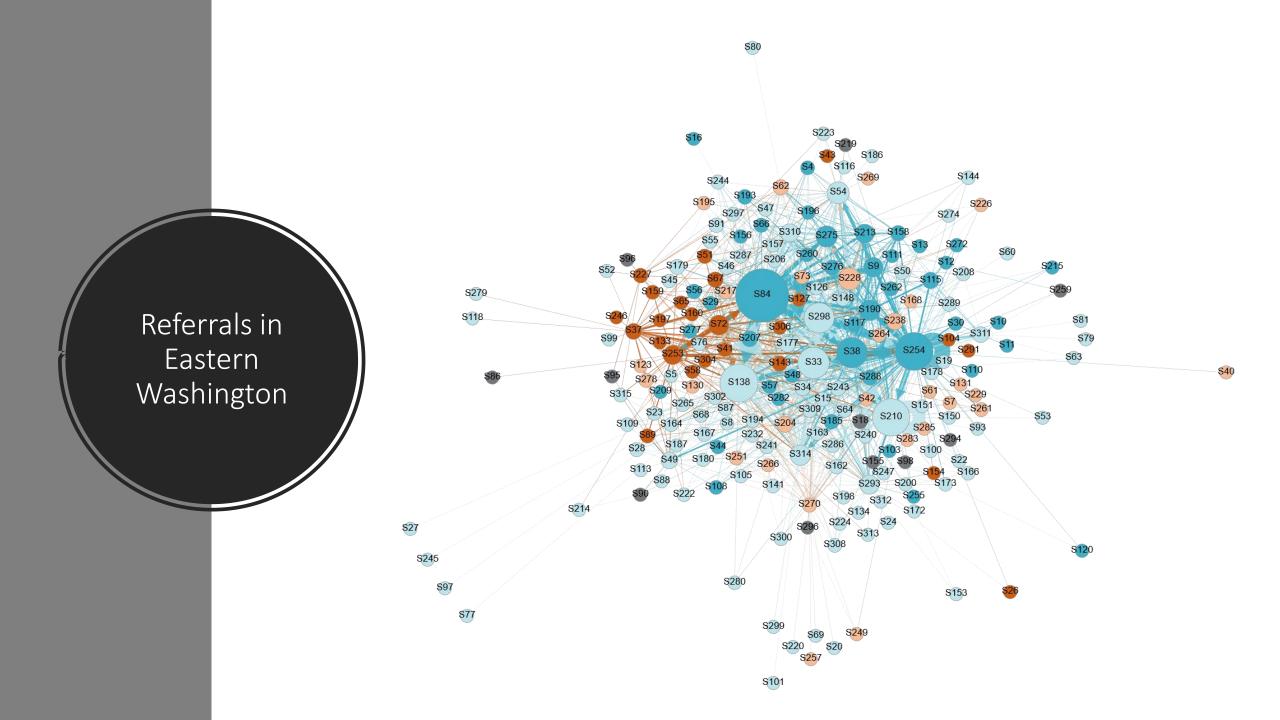

Collaboration in Spokane County

- Spokane County organizations collaborate extensively with one another and with regional organizations (90% of collaboration linkages), with relatively little collaboration reported in other geographic services areas (10% of linkages).
- 97% of Spokane County organizations are active in the collaboration network.
- 89% of Spokane County organizations collaborate with one another.
- Most Spokane County organization collaboration linkages are with other Spokane County organizations (53% of collaboration linkages) and regional organizations (38 % of linkages); it was least common for Spokane County organizations to collaborate with Adams & Lincoln County organizations (1% of linkages).
- 2% of all possible collaborative partnerships were reported Spokane County organizations.
- 41 collaboration silos exist within the collaboration network of Spokane County organizations.
- On average, each Spokane County organization maintains 6 collaborative partnerships with other Spokane County organizations.

Collaboration Takeaways

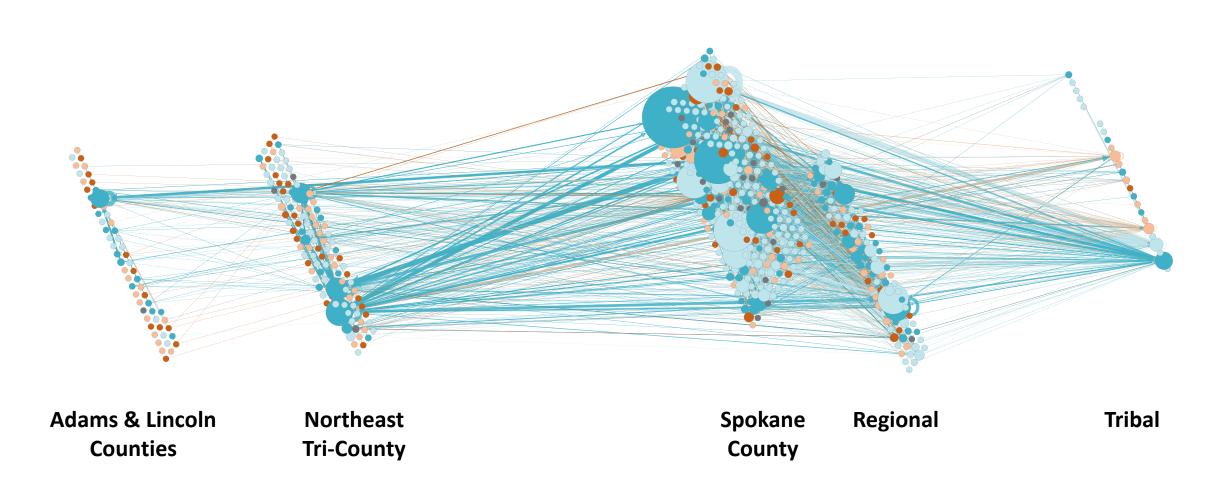

- Nearly all health system participants are involved in collaborating to serve people living in BHT's 6-county region.
- Regional organizations play a major role in collaboration across the BHT region.
- Organizations in several geographic service areas (GSAs) collaborate most frequently with regional organizations and other organizations in their own GSA.

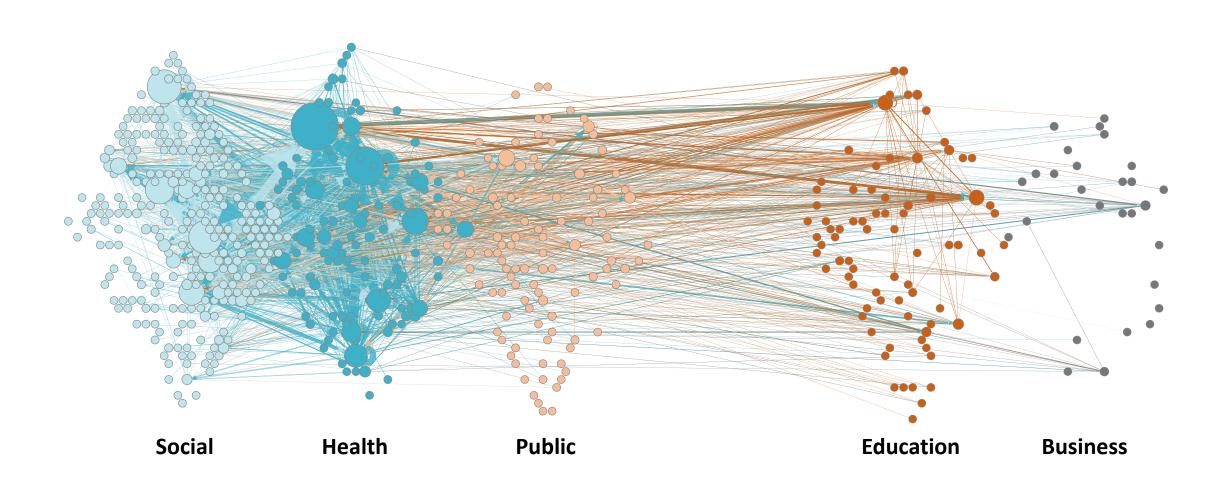

- Organizations refer extensively across counties and sectors.
 - This points to the need to find a standard referral system that functions across boundaries.
- 49% of referrals (n=1,891) were made across GSAs and 59% of referrals (n=2,264) were made across sectors.
- 83% of BHT health system participants are active in the referral network.
- Organizations collaborate across sectors more frequently than across geographic service areas (62% of collaborative linkages happen across sectors vs. 48% across geographic service areas).
- 1% of all possible referral linkages were reported across the region.
- 174 referral silos exist across the region.
- On average, each organization sends/receives referrals with 6 other organizations.

Referrals Overview

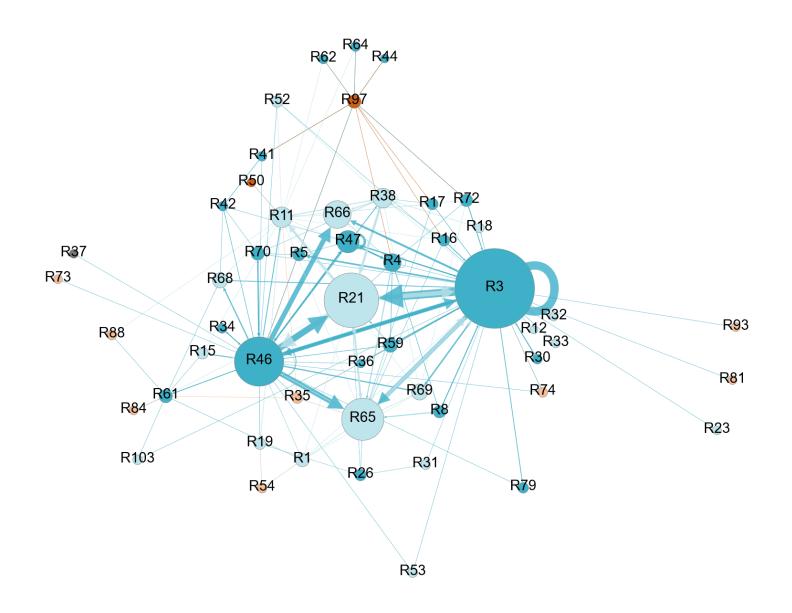

Referrals Across Counties

Referrals Across Sectors

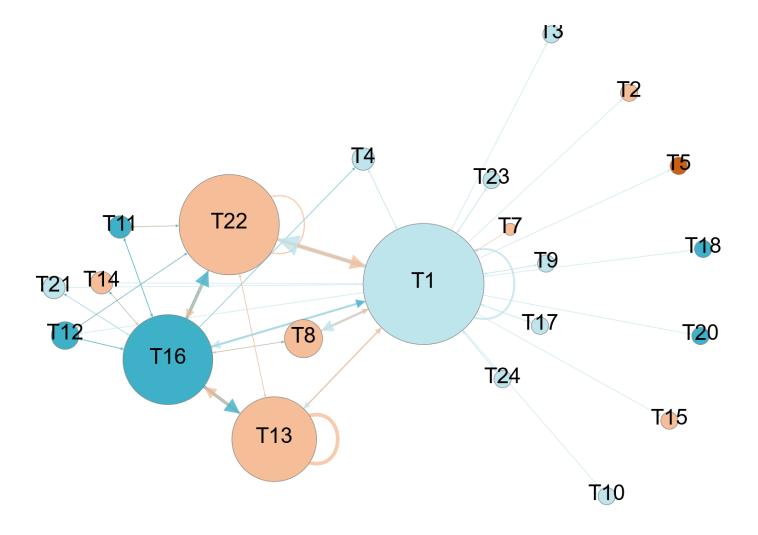

Referrals among Regional Organizations

Referrals among Regional Organizations

- 83% of regional organizations are active in the referral network.
- 50% of regional organizations referral with one another.
- 87% of regional organization referrals were sent/received across geographic service areas.
- Most regional organization referral linkages are with Spokane County organizations (66% of referral linkages); regional organizations refer least with organizations in Adams & Lincoln Counties (3% of reported referrals).
- 2% of all possible referral linkages were reported among regional organizations.
- 56 referral silos exist within the referral network of regional organizations.
- On average, each regional organization exchanges 2 referrals with other regional organizations.

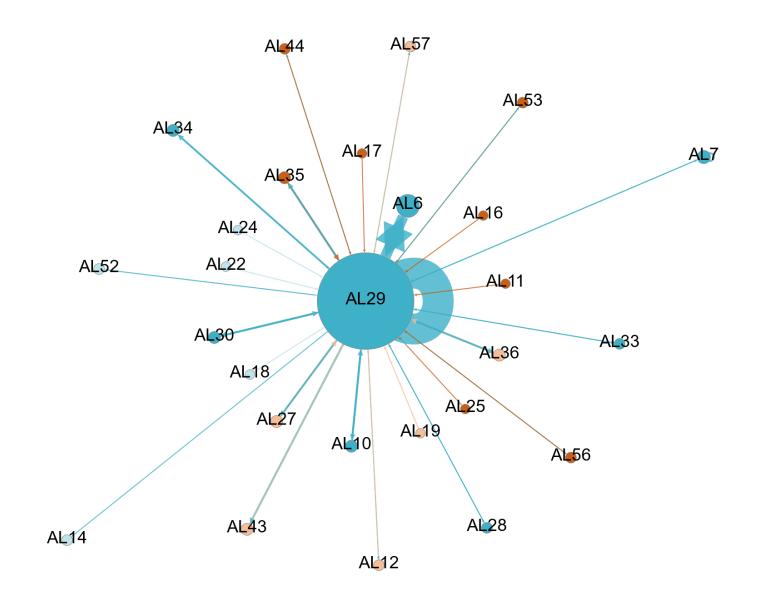

Referrals among Tribal Organizations

- Tribal organizations refer extensively across geographic services areas (GSAs), with 89% of reported referral linkages made with organizations in other GSAs.
- 92% of tribal organizations are active in the regional referral network.
- 92% of tribal organizations refer to other tribal organizations (compared to the region average of 73%).
- Most tribal organization referral linkages are with Spokane County organizations (52% of referral linkages) and regional organizations (23%); there were few reported referrals between tribal organizations and organizations in Adams & Lincoln Counties (1% of referral linkages).
- 10% of all possible referral linkages were reported among tribal organizations.
- 4 referral silos exist within the referral network of tribal organizations.
- On average, each tribal organization maintains 2 referral linkages with other tribal organizations.

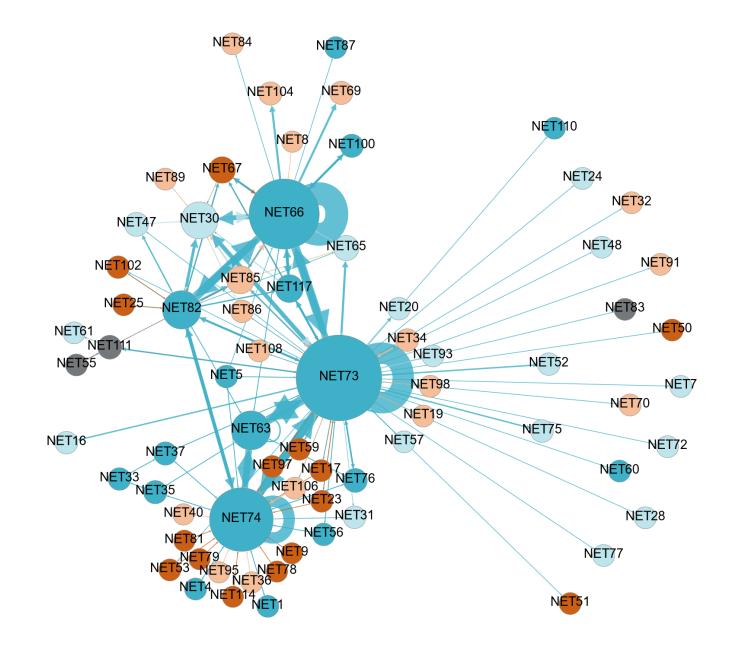

Referrals in Adams & Lincoln Counties

Referrals in Adams & Lincoln Counties

- 61% of Adams & Lincoln County organizations are active in the regional referral network.
- 47% of Adams & Lincoln County organizations refer with one another.
- Most Adams & Lincoln County organization referral linkages are with regional organizations (32% of referral linkages), with other Adams & Lincoln County organizations (27%), and with Spokane County organizations (26%); there were few reported referrals between Adams & Lincoln County organizations and tribal organizations (3% of referral linkages).
- 1% of all possible referral linkages were reported among Adams & Lincoln County organizations.
- 31 referral silos exist within the referral network of Adams & Lincoln County organizations.
- On average, each Adams & Lincoln County organization maintains 1 referral linkages with other Adams & Lincoln County organization.

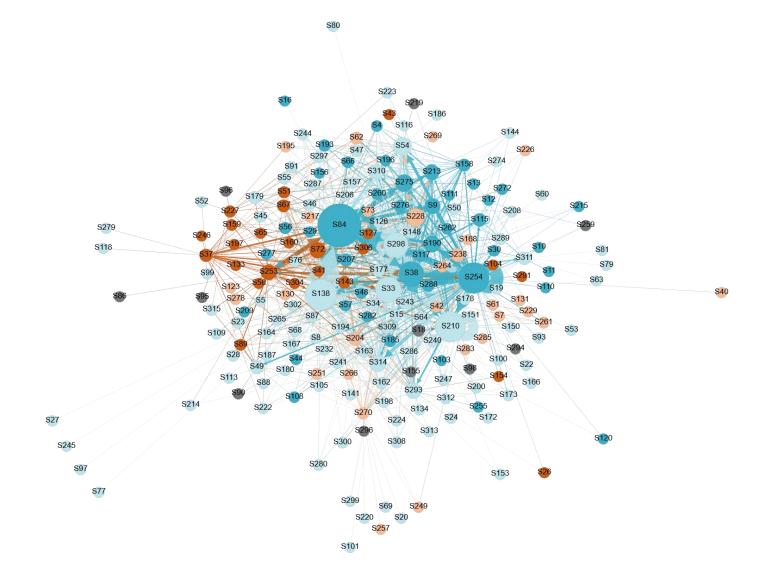

Referrals in Northeast Tri-County

Referrals in Northeast Tri-County

- 68% of Northeast Tri-County organizations are active in the regional referral network.
- 62% of Northeast Tri-County organizations refer with one another.
- Most Northeast Tri-County organization referral linkages are with other Northeast Tri-County organizations (32% of referral linkages) and with regional organizations (30% of referral linkages); there were few reported referrals between Northeast Tri-County organizations and Adams & Lincoln County organizations (3% of referral linkages).
- 1% of all possible referral linkages were reported among Northeast Tri-County organizations.
- 49 referral silos exist within the referral network of Northeast Tri-County organizations.
- On average, each Northeast Tri-County organization maintains 2 referral linkages with other Northeast Tri-County organizations.

Referrals in Spokane County

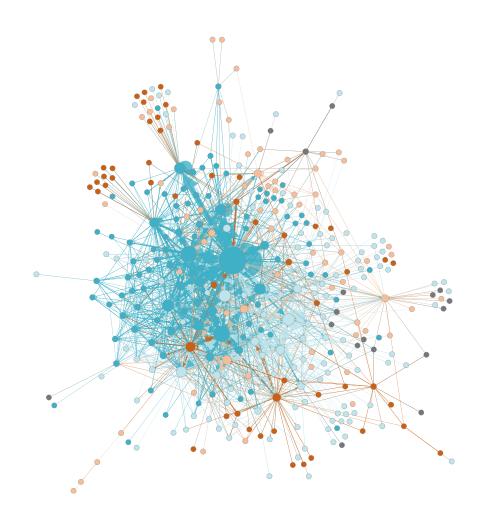

Referrals in Spokane County

- 72% of Spokane County organizations are active in the regional referral network.
- 67% of Spokane County organizations refer with one another.
- Most Spokane County organization referral linkages are with other Spokane County organizations (50% of referral linkages) and with regional organizations (35% of referral linkages); there were few reported referrals between Spokane County organizations and Adams & Lincoln County organizations (1% of Spokane County referral linkages).
- 2% of all possible referral linkages were reported among Spokane County organizations.
- 108 referral silos exist within the referral network of Spokane County organizations.
- On average, each Spokane County organization maintains 5 referral linkages with other Spokane County organizations.

Referrals Takeaways

- Most geographic service areas (GSAs) primarily refer across GSAs (73%-89% of referral linkages); Spokane County is the exception, with only 50% of referral linkages reported across GSAs.
- About three out of every four health system participants send and/or receive referrals in BHT's 6-county region.
- Spokane County organizations and Regional organizations play a major role in referrals across the BHT region.
